Medicinski fakultet u Rijeci

IZVEDBENI NASTAVNI PLAN
2021/2022

Za kolegij

Medical Informatics

Studij:	**Medical Studies in English (R)**
	Sveučilišni integrirani prijediplomski i diplomski studij
Katedra:	**Katedra za bioinformatiku i razvoj djelatnika i studenata**
Nositelj kolegija:	**prof. dr. sc Bilić-Zulle Lidija, dipl. inž., specijalist med. biokemije**
Godina studija:	**2**
ECTS:	**1.5**
Stimulativni ECTS:	**0 (0.00%)**
Strani jezik:	**Mogućnost izvođenja na stranom jeziku**

Podaci o kolegiju:

The course "Medical Informatics" is attended during the 2nd turn of the 2nd year of study of medicine, with a total duration of 20 school hours. Students are divided into 2 seminar groups for seminar classes. Each seminar group is in two training subgroups for practicals and has 10-14 students. Teaching is held in lecture halls of the faculty's main building and in the Computer Classroom (ground floor, left). Part of the seminar course is held for all students as demonstration lessons.

The student computer classroom is equipped with fifteen personal computers, and the practicals cover work with programs running in the Windows 7 operating environment. All computers are networked and connected to the Internet and equipped with headphones. During the practical each student is working independently on the computer.

Course content:

Basic IT concepts, medical data management, theory and information processing and communication. Application of medical informatics procedures. Importance, organization and use of medical language, coding and classification. The structure and importance of electronic health records. Computer analysis of biological signals and medical images. The construction and use of medical databases and databases with biomedical scientific papers. Strategies of Management and Classification of Medical Knowledge. Evidence-Based Medicine. Health Information Systems in Primary and Hospital Health Care. Clinical decision support system and their use in treating patients and in acquiring, processing and displaying medical knowledge. The role and role of medical models, modeling and simulations. Safety and confidentiality of medical data.

Assessment method:

Students are evaluated during each class at each seminar and practical unit. During the seminars, each student is assessed on the basis content from the textbooks and selected online content. Students prepare final seminar work on the given topics and present them in the lesson. The content, scope and knowledge of the topic of the final seminar, the presentation and the quality of the presentation are evaluated. The total number of score points for seminars is 28 points. Practicals are organized in 5 units. Accuracy and quality of the practical assignment are evaluated on each practical. Practicals are performed in the computer classroom and each student independently prepares assignments on the computer. A maximum of 42 score points is achieved on the practicals.
The maximum number of score points achieved in class is 70.

Student Assessment method

	Topics	Credits
S1	Introduction to Medical Informatics Information system security	-
S2	Structure of medical data	2+3
S3	Basic concepts and medical classifications	2+3
S4/5	Application of information technology in medicine, student presentations	18
P1	Electronic health record in primary care	3
P2	Medical content and network communication	3

	Topics	Credits
P3	Evidence-based medical decision making	3
P4	Hospital Information System (HIS)	3
P5	Final exercise	30
S6	Concluding Considerations on Medical Informatics	-
Total score:		70

Popis obvezne ispitne literature:

1. Coiera E. Guide to health informatics. Boca Raton: Taylor & Francis Group, (3rd edition), 2015.

Popis dopunske literature:

1. Shortlife EH, Perreault LE. Medical Informatics. New York - Tokyo: Springer, (2nd edition), 2001.
2. van Bemmel JH, Musen MA.Handbook of Medical informatics. New York - Tokyo: Springer,1997.
3. Degoulet P, Fieschi M. Introduction to clinical informatics. New York-Tokyo: Springer, 1997.
4. Warner HR, Sorenson DK, Bouhaddou O. Knowledge engineering in health informatics. New York-Tokyo: Springer, 1997.
5. Kern J, Petrovečki M, ur. Medicinska informatika. Medicinska naklada: Zagreb; 2009.

Nastavni plan:

Seminari popis (s naslovima i pojašnjenjem):

S1. Introduction to Medical Informatics/Information system security

Seminar 1 is an introductory course seminar. The students will receive basic information about the course, schedule, teaching and assessment. They are acquainted with the definition and emergence of informatics as a scientific discipline and medical informatics as its derivative. Students are familiarized with the structure and scope of the topics covered by the course.

The seminar in the field of Information systems security according to the instructions of the Ministry of Science, Education and Sports is an integral part of the course in the field of Information and Communication Sciences where students will be introduced to the content of the field.
Learning Outcomes: Define and describe the concept of information security. Describe the basic concepts of threat, vulnerability, attack, protective measure. Implement activities for the purpose of information systems data protection.

S2. Structure of medical data

Learning Outcomes: Understand the basic concepts that define the structure of medical data. Explain the purpose and use of non-medical data in medicine. Learn the basics of communication in computerized systems. Learn the structure and use of basic medical documents. Identify and list the basic standards and quality system in health care.

S3. Basic Terms and Medical Classification

Learning outcomes: Learn the meaning and application of basic IT concepts (information, knowledge, system, medical language, information theory, overwhelming, cybernetics). Understand classification systems and identify and define the most common medical classification (MKB-10, MKB-O, SNOMED, ATK, MeSH, DTS).

S4/5. Application of information technology in medicine

Learning outcomes: Learn and understand the basics of applying IT technology in medicine, especially in the field of collecting and processing biomedical signals, social network in medicine, modeling and simulation, telehealth and mobile health.

S6. Final Considerations on Medical Informatics

The seminar is interactive discussion, students and teacher are gathered together at the end of the course, guidance for further learning and development in the application of information technology in medicine are provided.

Vježbe popis (s naslovima i pojašnjenjem):

P1. Electronic health record in primary care

Learning Outcomes: Students will get insight into program support for electronic health records management - Medicus.net (http://www.mcs.hr/en/proizvodi-i-usluge/medicus.net/12). Simple functions in Medicus.net network support for family medicine practitioners will be tought. Students will be able to create health records (anamnesis, referral, prescription, medical report) and browse the electronic health records (history of the disease, prescriptions, referrals, cases, diagnostic-therapeutic procedures (DTP).

P2. Medical Content and Network Communication

Learning Outcomes: Students will understand basic concepts of online databases, understand the organization of scientific literature in medicine, will be able to independently search the Medical Subject Headings (MeSH) and the Medline bibliographic database through PubMed service (https://www.ncbi.nlm.nih.gov/pubmed/), and other online sources of trusted medical contents wil be introduced.

P3. Medical decision-making based on (scientific) evidence

Learning Outcomes: Students will learn about evidence-based medicine and medical decision-making. They will be able to use UptoDate database - clinical decision support resource associated with improved outcomes. They will learn to set up clinical inquiries via online service under the PICO scheme (P – patient, problem or population, I – intervention, C – comparison, control or comparator, O – outcome).

P4. Hospital Information System (HIS)

Learning Outcomes: Students will learn the basic functionalities of HIS (medical, financial and business processes management), familiarize with application features and independently view patient guidance through HIS (electronic health records management, electronic ordering, electronic therapy) and e with the possibilities of integration with external applications (laboratory and radiological information systems).

P5. Managing and displaying medical data - final practical

Learning Outcomes: self-search Medline database using PubMed (using Thesaurus MeSH), and compile search results in Ms PowerPoint. Self-search of UpToDate databse and compile results in in Ms Word's using text formatting instructions (inserting pages, editing font types and fonts, edges, edges, tables, images, literary lists, content editing).

Obveze studenata:

- regular attendance
- project work, presentation of seminar work

Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):

ECTS Grading System:

Student grading will be conducted according to the current Ordinance on Studies of the University of Rijeka (approved by the Senate) and the Ordinance on Student Grading at the Faculty of Medicine in Rijeka (approved by the Faculty Council). Student work will be assessed and graded during the course and on the final exam. During the course, a student may achieve up to 70% of the grade, while at the final exam up to 30% of the grade. Students are graded according to the ECTS credit (A-E) and numeric (1-5) system. Students are obliged to attend all forms of teaching during the course and may be absent from 30% of the classes. If a student is absent for more than 30% of the classes, he will not receive a signature and will have to re-enter the course.

I. Assessment and grading in class

Assessment method:

Students are evaluated during each class at each seminar and practical unit. During the seminars, each student is assessed on the basis content from the textbooks and selected online content. Students prepare final seminar work on the given topics and present them in the lesson. The content, scope and knowledge of the topic of the final seminar, the presentation and the quality of the presentation are evaluated. The total number of score points for seminars is 28 points. Practicals are organized in 5 units. Accuracy and quality of the practical assignment are evaluated on each practical. Practicals are performed in the computer classroom and each student independently prepares assignments on the computer. A maximum of 42 score points is achieved on the practicals.
The maximum number of score points achieved in class is 70.

	Topics	Credits

	Topics	Credits
S6	Concluding Considerations on Medical Informatics	-
Total score:		70

The student must collect at least 35 credits in order to gain access to the final exam. A student who collects less than 35 credits during class is classified as F (unsufficient) meaning that he did not meet the criteria and must re-enroll the course. The final exam is a written test, consisting of 30 questions. The student passed the exam if he answered exactly 15 questions or more.

The marks awarded on the exam are summed up with the points earned in the class and the sum represents the total score.

Grade	Credits
A (excellent, 5)	90-100
B (very good, 4)	75-89,99
C (good, 3)	60-74,99
D (sufficient, 2)	50-59,99
F (unsufficient, 1)	0-49,99
