Course information (short description of the course, general information, and instructions, where and in which form is the course organized, necessary tools, instructions on class attendance and preparation, student obligation, etc):

Simulation of Clinical Skills is a mandatory course in the sixth year of the Integrated Undergraduate and Graduate University Study of Medicine in English. Comprising 8 hours of lectures and 125 hours of practicals, the course totals 133 hours, accounting for 6 ECTS.

The course is held by an experienced team of medical educators and physicians from different departments, including Anaesthesiology, Resuscitation, Emergency, and Intensive Care Medicine, Surgery, Urology, and Paediatrics. These educators are based at the Faculty of Medicine, University of Rijeka, and Clinical Hospital Centre Rijeka. On top of live lectures and workshops, the course is comprised of obligatory online asynchronous written materials and video-tutorial and demonstrations.

The primary objective of this course is to equip sixth-year medical students with the essential skills and knowledge required to respond effectively to diverse emergency medical conditions. The course employs advanced simulation techniques to enhance students' decision-making skills, practice their clinical judgement, and develop effective communication and teamwork. This is achieved through a combination of concise theoretical overviews of specific medical skills and/or emergency medical conditions, and the practical application of this knowledge in simulations of real-world scenarios.

COURSE LEARNING OUTCOMES

After finishing the course, the student should be able to:

A. **COGNITIVE DOMAIN – KNOWLEDGE**

1. List the most common medical emergencies, including various causes of acute respiratory and circulatory failure, acute coronary syndrome and malignant arrhythmias, sudden neurological deterioration, sepsis and septic shock, fluid and electrolyte imbalances, hypovolemic shock, acute poisoning, burns, polytrauma, and paediatric emergencies.
2. Describe the typical clinical presentation and diagnostic tools for evaluating common medical emergencies.
3. Describe the necessary medication, procedures, and equipment for the management of the most common medical emergencies.

A. **PSYCHOMOTOR DOMAIN – SKILLS**

1. Recognize and manage cardiorespiratory arrest according to advanced life support guidelines.
2. Conduct a structured assessment (ABCDE, SAMPLE) of simulated patients experiencing medical emergencies, identify pathological findings, and apply this knowledge to create a differential diagnosis and propose diagnostic plan.
3. Analyse results of basic diagnostic tests: laboratory tests (blood count, glucose and electrolyte values, urea, creatinine, cardiac and inflammatory biomarkers, BGA), coagulation tests, microbiology cultures, ECG, and chest x-ray.
4. Manage a simulated patient with a medical emergency, including selecting appropriate treatment and emergency procedures based on clinical findings and diagnostic results.
5. Communicate effectively with team-members during clinical scenarios and other medical personnel during patient hand-over, fusing a structured approach (e.g. SBAR).

A. **AFFECTIVE DOMAIN – VALUES AND ATTITUDES**

1. Recognize the importance of structured patient assessment in high-stress situations.
2. Acknowledge the importance of early recognition of deteriorating patient and the need for prompt intervention planning.
3. Understand the significance of effective communication among medical personnel during medical emergencies.

COURSE CONTENT

To achieve the learning outcomes, classes are organized in 10 thematic units that utilize simulation medicine to bridge the gap between theoretical knowledge and practical application:

1. **FOUNDATIONS OF SIMULATION MEDICINE: TECHNIQUES AND BEST PRACTICES**

(How can simulation-based learning enhance the acquisition and application of clinical skills in medical practice?)

L1 Introduction to the simulation medicine

eP. Introduction to simulation medicine: learning techniques and best practices

1. **STRUCTURED APPROACH TO MEDICAL EMERGENCIES**

(How to assess, recognize, and manage a deteriorating patient in daily practice?)

L2 Cardiopulmonary resuscitation algorithm

L3 Initial assessment and hand-over of acutely ill patients (ABCDE, SAMPLE and SBAR)

L4 Essentials for interpretation of 12-lead ECG in medical emergencies

L5 Initial assessment and management of a patient with cardiac arrhythmias

P1 Recognition and management of a deteriorating patient; cardiopulmonary resuscitation algorithm: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

1. **CARDIAC EMERGENCIES**

(How to effectively recognize, assess, and manage life-threatening cardiac emergencies in daily practice?)

P2 Cardiac emergencies – background, assessment, recognition, and management: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

1. **ACUTE RESPIRATORY FAILURE**

(How to assess, recognize and manage a patient in acute respiratory failure in daily practice?)

P3 Acute respiratory failure – background, assessment, recognition, and management: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

1. **SUDDEN NEUROLOGICAL DETERIORATION**

(How to assess, recognize and manage a patient with sudden deterioration in neurologic status in daily practice?)

P4/part I Sudden deterioration in neurologic status: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

1. **SEPSIS AND SEPTIC SHOCK**

(How to assess, recognize and manage a patient with suspected sepsis/septic shock in daily practice?)

P4/part II Sepsis and septic shock: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

1. **COMPREHENSIVE MANAGEMENT OF ACUTE MEDICAL EMERGENCIES**

(How to assess, recognize and manage a patient with haemorrhage and haemorrhagic shock, electrolyte disturbances, acute poisoning, and burns in daily practice?)

P5 Haemorrhage and haemorrhagic shock, electrolyte disturbances, acute poisoning, burns

1. **INJURIES AND TRAUMA LIFE SUPPORT**

(How to assess and manage an injured patient in daily practice?)

L6 Trauma life support

P6 Essential surgical clinical skills: suturing, splints, repositions, urinary bladder catheterisation

P7 Trauma assessment and management: onsite workshop in conjunction with educational materials provided via the Merlin e-learning platform

9. CLINICAL SKILLS IN PAEDIATRICS

(How to assess, recognize and manage paediatric emergency in daily practice?)

L7 Initial assessment and management of paediatric emergencies

P8 Paediatric emergencies and life support

10. THINKING IN PATERNS OF CLINICAL FEATURES IN WIDE DIFFERENTIAL DIAGNOSIS

(How to properly integrate acquired theoretical and practical knowledge in a wide variety of different medical scenarios and perform an effective communication between medical personnel?)

P9 Integrated simulation of all clinical skills – part 1

P10 Integrated simulation of all clinical skills – part 2

COURSE CONCEPT

The primary objective of the course “Simulation of Clinical Skills,” held at the Skills Lab Simulation Centre (Kabinet vještina), is to equip sixth-year medical students with the essentials skills and knowledge required to respond effectively to diverse emergency medical situations. The course employs advanced simulation techniques to enhance decision-making abilities, refine clinical judgement, and foster effective communication and teamwork.

Innovatively using the flipped classroom model, students independently study theoretical overviews of essential medical skills and specific emergency conditions via Merlin e-learning platform, prior to onsite classes. This independent study is followed by highly interactive in-class sessions, where the theoretical knowledge is tightly interwoven with practical simulation exercises. These theoretical segments aim to equip students with the robust skillset necessary to properly recognize, assess, and manage varying medical emergencies.

Upon mastering the theoretical aspects, students are introduced to a range of simulation scenarios that mimic diverse clinical conditions. These scenarios provide an ideal platform for students to implement the theoretical knowledge they have acquired throughout the medical school and summarized during the theoretical parts of the classes. Each simulation is run by a team of students, consisting of one team-leader and 2-3 team members, and is moderated by a teacher. This structure ensures that students receive ample hand-on experience while also promoting effective team communication.

As a conclusion to each simulation scenario, a teaching discussion is held where personalized feedback is provided to each student. This feedback mechanism is integral to the learning process, enabling students to reflect on their performance and make necessary adjustments for future simulations.

Nastavni plan:

Predavanja popis (s naslovima i pojašnjenjem):

Lecture 1. Introduction to Simulation Medicine

Understand the aims, contents, and requirement of the course. Define the role of simulation-based medical teaching and learning.

Lecture 2. Cardiopulmonary Resuscitation Algorithm

Describe how to identify patient in cardiorespiratory arrest. Explain and manage resuscitation following advanced life support guidelines, understand treatment of shockable and non-shockable rhythms. List potentially reversible causes of cardiac arrest.

Lecture 3. Initial assessment and hand-over of acutely ill patient (ABCDE, SAMPLE and SBAR)

Explain assessment methods and management of deteriorating patient using ABCDE approach. Describe a structured approach for communication between team members during management of a patient (e.g., closed-loop communication), as well as during patient handover (e.g. SBAR).

Lecture 4. Essentials for interpretation of the 12-lead ECG in medical emergencies

Explain basic electrocardiography, describe features of normal 12-lead ECG. Identify P wave, PQ interval, QRS complex, ST segment and T wave on ECG and describe normal duration of different intervals. Describe features of ECG in acute coronary syndrome and the most common rhythm and rate disturbances.

Lecture 5. Initial assessment and management of a patient with cardiac arrhythmias

Describe how to assess and manage a patient with rate and/or rhythm disturbance. List and define life-threatening features (e.g., shock, syncope, myocardial ischaemia, severe heart failure). List the indications for synchronized cardioversion and transcutaneous pacing.

Lecture 6. Trauma assessment and management

Describe assessment and management of trauma patients, including primary survey, ongoing exams, and secondary survey.

Lecture 7. Initial assessment and management of paediatric emergencies

List clinical skills in paediatric population. Explain the peculiarities of taking medical history, performing physical examination, and preparation of the equipment needed for paediatric population. Describe the algorithms of advanced life support of paediatric population.

Vježbe popis (s naslovima i pojašnjenjem):

Practical 1. Recognition and management of deteriorating patient; advanced life support

Practical 1. Recognition and management of deteriorating patient; advanced life support - onsite class in conjunction with obligatory educational materials provided via Merlin e-learning platform, lessons include:
- Initial assessment of acutely ill patient, with written educational material and video-tutorial,
- Essentials for ECG interpretation in medical emergencies, with written educational material,
- Airway management, with written educational material and video-demonstration,
- Cardiopulmonary resuscitation, with written educational material and video-demonstration on ALS and ABCDE approach, as well as safe defibrillation,
- Acute coronary syndromes.

Learning outcomes: Apply ABCDE for initial assessment of a (simulated) patient, report the findings in a structured manner, interpret the pathological findings and incorporate them in a differential diagnosis, select the appropriate diagnostic tools to confirm the diagnosis, and apply the correct treatment. Interpret the 12-lead electrocardiogram (ECG). Recognise cardiopulmonary arrest, identify heart rhythm associated with cardiac arrest, apply resuscitation guidelines correctly, and perform safe defibrillation when indicated. Explain the guidelines for bradyarrhythmia and tachyarrhythmia, interpret the 12-lead electrocardiogram, define clinical and diagnostic findings important for selection

of appropriate treatment, implement the knowledge and skills needed for treatment of medical conditions in simulations of different clinical scenarios of brady- and tachyarrhythmia, perform structured handover of the (simulated) patient.

Practical 2. Acute Respiratory Failure – background, assessment, recognition, and management

Practical 2. Acute Respiratory Failure – background, assessment, recognition, and management - onsite class in conjunction with obligatory educational materials provided via Merlin e-learning platform, lessons include:
- Acute respiratory failure, with written educational materials,
- Arterial blood gases, with written educational materials and video-tutorial,
- Anaphylaxis, with written educational materials and video-tutorial,
- Acute bronchospasm, with written educational materials and video-tutorials on asthma attack and acute exacerbation of COPD,
- Pulmonary oedema, with written educational materials and video-tutorial.

Learning outcomes: Apply ABCDE for initial assessment of a (simulated) patient with acute respiratory insufficiency, report the findings in a structured manner, interpret the pathological findings and incorporate them in a differential diagnosis, select the appropriate diagnostic tools to confirm the diagnosis, and apply the correct treatment. Interpret blood gas analysis. Explain the guidelines for management of anaphylaxis, severe asthma attack, pulmonary oedema, and acute exacerbation of chronic obstructive pulmonary disease, define clinical and diagnostic findings important for selection of appropriate treatment, implement the knowledge and skills needed for treatment of mentioned medical conditions, perform structured handover of the (simulated) patient.

Practical 3. Sudden Deterioration in Neurologic Status. Sepsis and septic shock

Practical 3. Sudden Deterioration in Neurologic Status. Sepsis and septic shock - onsite class in conjunction with obligatory educational materials provided via Merlin e-learning platform, lessons include:
- Sudden neurological deterioration, with written educational materials,
- Seizures, with written educational materials,
- Acute poisoning, with written educational materials and video-tutorial,
- How to assess GCS? With written education materials, video-tutorial, and video-demonstration,
- Brain oedema, with video-tutorials on pathophysiology, initial assessment, and treatment,
- Sepsis and septic shock, with written educational materials and video tutorial on SOFA and qSOFA score, as well as First hour bundle.

Learning outcomes: Apply ABCDE for initial assessment of a (simulated) patient with sudden deterioration in neurologic status, report the findings in a structured manner, interpret the pathological findings and incorporate them in a differential diagnosis, select the appropriate diagnostic tools to confirm the diagnosis, and apply the correct treatment. Perform and interpret neurological examination, including Glasgow Coma Scale (GCS). Explain the guidelines for management of stroke, traumatic brain injury, increased intracranial pressure, and blood glucose disturbances, define clinical and diagnostic findings important for selection of appropriate treatment, implement the knowledge and skills needed for treatment of mentioned medical conditions, perform structured handover of the (simulated) patient.
Explain background for sepsis and septic shock, perform an assessment of the (simulated) patient suspected of having sepsis with special emphasis on quick-SOFA and SOFA score, define the most common sites and pathogens associated with sepsis, recognize, and manage septic patient with emphasis on first-hour bundle.

Practical 4. Fluid and electrolyte disturbances and therapy; hypovolemic shock

Practical 4. Fluid and electrolyte disturbances and therapy; hypovolemic shock - onsite class in conjunction with obligatory educational materials provided via Merlin e-learning platform, lessons include:
- Intravenous fluids, with written educational materials and video-tutorial on basic physiology,
- Electrolyte disorders, with written educational materials and video-tutorial on Hypo- and hyperkalaemia,
- Haemorrhage and haemorrhagic shock, with written educational materials and video-tutorial on the same topic.

Learning outcomes: Explain water distribution within the body, electrolyte homeostasis, basal metabolism, the most common reason for hypovolemia, and types of hypovolemic shock. Apply ABCDE for initial assessment of a (simulated) patient with hypovolemia, report the findings in a structured manner, interpret the pathological findings and incorporate them in a differential diagnosis, select the appropriate diagnostic tools to confirm the diagnosis, and apply the correct treatment. Explain the guidelines for haemorrhagic shock, define clinical and diagnostic findings important for selection of appropriate treatment, implement the knowledge and skills needed for treatment of mentioned medical conditions, order tranexamic acid and blood products timely, perform structured handover of the (simulated) patient. Explain the guidelines for hypo- and hyperkalemia, interpret the 12-lead electrocardiogram, define clinical and

diagnostic findings important for selection of appropriate treatment, implement the knowledge and skills needed for treatment of mentioned medical conditions in simulations of different clinical scenarios.

Practical 5. Trauma Assessment and Management

Practical 5. Trauma Assessment and Management - onsite class in conjunction with obligatory educational materials provided via Merlin e-learning platform, lessons include:
- Trauma assessment and management, with written education materials and video-tutorials on initial assessment and management, as well as thoracic and abdominal trauma,
- How to perform a primary survey? with written education materials and video-demonstration,
- How to apply pelvic splint? with written education materials and video-demonstration,
- How to remove helmet? with written education materials and video-demonstration,
- How to immobilize cervical spine? with written education materials and video-demonstration,
- Burns, with written education materials and video-tutorial.

Learning outcomes: Define the guidelines for trauma life support. Perform primary survey with “5 second round,” handover from the prehospital team, and assessment of airway, breathing, circulation, (neurological) disability and exposure of the (simulated) patient. Describe possible findings associated with airway, thoracic, abdominal, pelvic, and limb trauma. Recognize and integrate pathological findings into suspected diagnosis, choose adequate emergency treatment and procedures, as well as the need for a “whole body” CT scan. Explain and perform cervical spine immobilization, stabilization and immobilization of the head and neck, as well as whole body on a long backboard.

Practical 6. Recognition and management of acutely ill or injured patient in out-of-hospital setting

Learning outcomes: Decribe the pecularities and limitation of out-of-hospital patient assessment and diagnostics. List therapy and techniques available in out-of-hospital setting.

Practical 7. Clinical Emergencies in Obstetrics and Gynaecology

Learning outcomes: Define the most common medical emergencies in obstetrics and gynaecology. Perform basic assessment of pregnant woman. List the most common medical emergencies in pregnant women, non-related to pregnancy. Describe the specificities of medical care for a pregnant woman in other medical emergencies, list medication safe for mother and the baby. Describe the method and list the steps of delivery in out-of-hospital setting.

Practical 8. Paediatric Emergencies and Life Support

Learning outcomes: Apply ABCDE for initial assessment of a (simulated) child, report the findings in a structured manner, interpret the pathological findings and incorporate them in a differential diagnosis, propose diagnostic and treatment options. List the most common medical emergencies in paediatric population. Describe dose modification for therapy given to paediatric population. Get familiarized with internet-application that help with appropriate therapy and doses in paediatric population (e.g., PediHelp). Recognize cardiopulmonary arrest, identify heart rhythm associated with cardiac arrest, apply resuscitation guidelines correctly, and perform safe defibrillation in a (simulated) child if indicated.

Practical 9. Integrated simulation of all clinical skills – part 1

Learning outcomes: Integrate knowledge and skills acquired during previous seminars and practicals and apply them in clinical scenarios of different medical emergencies.

Practical 10. Integrated simulation of all clinical skills – part 2

Learning outcomes: Integrate knowledge and skills acquired during previous seminars and practicals and apply them in clinical scenarios of different medical emergencies.

Obveze studenata:

Student obligations:

All information regarding the course, as well as the obligatory materials needed to prepare for the course, will be available on the Merlin e-learning platform. Students should visit the mentioned platform regularly in order to be informed in a timely manner of any facts or changes concerning the course. Furthermore, students should regularly fulfil the obligations related to course attendance and active participation in classes.

COURSE ATTENDANCE:

Classes are organized according to the schedule published on the Merlin e-learning platform. Attendance of all lectures and practicals is mandatory, and attendance records are kept separately for each student. All classes start exactly at the scheduled time, and being late is treated as an absence from the class. Entries and exits during classes are not allowed. A student may justifiably miss up to 30% of the hours provided separately for lectures and practicals, solely for health reasons, which must be confirmed by a medical certificate. If a student is unjustifiably absent from more than 30% of class hours for each class type, the student cannot continue to attend the course and does not meet the mandatory requirement for passing the course. In case of justifiably missed class, individual appointment should be arranged between the student and kabinet.vjestina@gmail.com for the purpose of fulfilling mandatory requirements.

In the event that a student is found to have misused the inp.medri.uniri. hr application for attendance purposes, such actions will be considered a serious violation of academic integrity. Consequently, the matter will be referred to the Ethics Committee of the Medical Faculty for a comprehensive review and appropriate disciplinary action.

ACTIVE PARTICIPATION IN CLASSES:

Predominantly comprised of highly interactive classes, the course “Simulation of clinical skills” is structured around a flipped classroom model, encouraging pre-class preparation and active in-class participation. Teachers provide a succinct theoretical overview at the beginning of each session, and students – lead by a designated team-leader – apply this knowledge by engaging in running a clinical scenario with support from their team members.

In each scenario, the team-leader is tasked with patient assessment, formulation of differential diagnoses based on findings, deciding on appropriate diagnostic tests, determining necessary procedures and therapies, and making the final decision on patient discharge or hospital admission. In cases of hospital admission, students are encouraged to deliver a structured patient hand-over to another simulated medical specialist. Teachers moderate the course of the clinical scenario, providing insightful teaching discussion and feedback to all team members once the scenario concludes.

The benefits of this course are intrinsically linked to the level of student engagement and preparation. Optimal learning outcomes are achieved when clinical scenarios run seamlessly, with students accurately identifying pathological findings, incorporating them into differential diagnoses, and informing subsequent patient management. Therefore, **students are expected to come to each session well-prepared and proficient in the ABCDE approach and cardiopulmonary resuscitation guidelines, with prior theoretical knowledge of managing medical emergencies. In particular, this means that the student is obligated to thoroughly study the “Simulation of Clinical Skills – a practical guide” and other educational materials on the Merlin e-learning platform before attending the practical workshops. Additionally, as this course is on the final year of medical school and serves to integrate all the previous knowledge from prior years, the student is expected to have a solid theoretical background in all major clinical courses, such as internal medicine, neurology, surgery, and other relevant disciplines.** Students are encouraged to refer to the provided (obligatory and additional) educational materials during the practicals for a deeper understanding and better application of the skills under study. All of the educational materials on Merlin e-learning platform will be available before the beginning of the course.

Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):

Assessment (types and description of assessment etc):

Student assessment in the course “Simulation of Clinical Skills” is designed to provide regular feedback and evaluate students’ growth over time. The assessment strategy incorporates both formative and summative assessments.

FORMATIVE ASSESSMENT

Formative assessments are strategically incorporated throughout the duration of the course. These assessments take shape in teaching discussions, succeeded by personalized feedback upon the completion of each simulated scenario. The goal of these iterative process of learning, assessment and feedback is designed to promote students’ continuous learning and enhance their clinical skills and knowledge.

Formative assessment is based on the modified Sweeney-Clark Simulation Evaluation Rubric, which is accessible via the Merlin e-learning platform. The evaluation rubric categorizes student (team leaders) into varying proficiency levels: novice, advanced beginner, competent, proficient, or expert level. This categorization is achieved through assessment of seven distinct areas: ABCDE assessment, SAMPLE history, choice and interpretation of laboratory data and diagnostics, medical interventions, clinical judgement, communication skills and cardiopulmonary resuscitation measures.

This formative approach encourages students to develop a deeper understanding of the subject matter, refine their practical skills, and apply their knowledge in real-time. The frequent feedback and discussions provide students with an opportunity to reflect on their performance, understand their strengths, and identify areas for improvement.

SUMMATIVE ASSESSMENT

Summative assessment for the course “Simulation of Clinical Skills” adheres to the established grading regulations at the University of Rijeka and the Faculty of Medicine in Rijeka. Comprising of both **continuous and final evaluation** methods, the assessment allows for a maximum of 100 credits, split equally between continuous coursework (50 credits, 50%) and the final practical examination (50 credits, 50%). A minimum score of 25 credits in both categories is necessary to pass the course and earn the corresponding ECTS credits.

The continuous assessment portion of the course, worth up to 50 credits, evaluates students’ acquisition of knowledge throughout the course via five brief obligatory tests. These tests align with the themes of practical sessions 1-5, with each test offering a potential maximum of 10 credits. Credits are awarded provided that the student correctly answers a minimum of 50% of the questions. The tests can incorporate a variety of question types, including single best answer, multiple-choice and short descriptive questions. These assessments are designed to gauge students’ understanding of the course’s theoretical elements.

Here is a credit allocation chart for the obligatory tests in continuous assessment:

% of correct answers	credits
50%	5
51-60%	6
61-70%	7
71-80%	8
81-90%	9
91-100%	10

The final evaluation, which also contributes 50 credits towards the total assessment score, can only be taken by students who have:

- Earned more than 25 credits in continuous assessments, and
- Maintaned a maximum of 30% of **justified** absences from classes.

The final evaluation, conducted at the end of the course, utilizes the Objective Structured Clinical Examination (OSCE) format on a simulated scenario of a medical emergency.

Here is a credit allocation chart for the OSCE:

% of correct answers	credits
50%	25
51-60%	30
61-70%	35
71-80%	40
81-90%	45
91-100%	50

To pass the course and obtain the allocated ECTS credits, a student must successfully pass both the continuous and final evaluation, amassing more than 50 credits in total.

This holistic evaluation system ensures students' knowledge and practical skills are adequately assessed, promoting their readiness for real-world medical practice.

Ostale napomene (vezane uz kolegij) važne za studente:

Other information (related to the course) important for students:

COMMUNICATION WITH TEACHERS:

Teachers are available daily during working hours via e - mail addresses (available on the webpage of the Faculty of Medicine in Rijeka and Merlin e-learning platform) for all questions concerning the course. Consultations are possible by appointment and can be conducted live or through the online platform MS Teams.

ACADEMIC INTEGRITY:

It is expected that the teacher will respect the Code of Ethics of the University of Rijeka, and the students the Code of Ethics for students at the University of Rijeka.

	Practical 1. Recognition and management of deteriorating patient; advanced life support:
	• Kabinet vještina, vježbalište 3 (08:00 - 17:45) [355]
	  ◦ CSS G3
	• Kabinet vještina, vježbalište 4 (08:00 - 17:45) [1913]
	  ◦ CSS G4

izv. prof. dr. sc. Bilić Čače Iva, dr. med. [374] · naslovna asistentica Božić Katarina, dr. med. [1913] · asistent Bura Matej, dr. med. [355] · izv. prof. dr. sc. Lah Tomulić Kristina, dr. med. [372]	
09.01.2024	

	Practical 2. Acute Respiratory Failure – background, assessment, recognition, and management:
	• Kabinet vještina, vježbalište 4 (08:00 - 17:45) [353]
	  ◦ CSS G4
	• Kabinet vještina, vježbalište 3 (08:00 - 17:45) [2304]
	  ◦ CSS G3

naslovni asistent Barbalić Berislav, dr. med. [2304] · Šuper-Petrinjac Erika, dr. med. [353]	
10.01.2024	

	Practical 6. Recognition and management of acutely ill or injured patient in out-of-hospital setting:
	• ZZHM PGŽ Rijeka (08:00 - 17:00) [2765] [471]
	  ◦ CSS G1
	  ◦ CSS G2
	
	Practical 3. Sudden Deterioration in Neurologic Status. Sepsis and septic shock:
	• Kabinet vještina, vježbalište 3 (08:00 - 17:45) [354]
	  ◦ CSS G3
	• Kabinet vještina, vježbalište 4 (08:00 - 17:45) [1404]
	  ◦ CSS G4

naslovna asistentica Kajčić Senka, dr. med. [471] · naslovni asistent Maroević Jan, dr. med. [1404] · naslovna asistentica Pičuljan Ana, dr. med. [354] · naslovni viši asistent Rošić Damir, dr.med. [2765]	
11.01.2024	

	Practical 9. Integrated simulation of all clinical skills – part 1:
	• Kabinet vještina, vježbalište 1 (08:00 - 17:00) [354]
	  ◦ CSS G1
	• Kabinet vještina, vježbalište 2 (08:00 - 17:00) [1912]
	  ◦ CSS G2
	
	Practical 4. Fluid and electrolyte disturbances and therapy; hypovolemic shock:
	• Kabinet vještina, vježbalište 3 (08:00 - 17:45) [353]
	  ◦ CSS G3
	• Kabinet vještina, vježbalište 4 (08:00 - 17:45) [1914]
	  ◦ CSS G4

naslovna asistentica Pičuljan Ana, dr. med. [354] · naslovni asistent Vuksan Ivan, dr. med. [1912] · naslovni asistent Ševeljević Ivan, dr. med. [1914] · Šuper-Petrinjac Erika, dr. med. [353]	
12.01.2024	

	Practical 10. Integrated simulation of all clinical skills – part 2:
	• Kabinet vještina, vježbalište 1 (08:00 - 17:00) [354]
	  ◦ CSS G1
	• Kabinet vještina, vježbalište 2 (08:00 - 17:00) [1912]
	  ◦ CSS G2
	
	Practical 8. Paediatric Emergencies and Life Support:
	• Kabinet vještina, vježbalište 3 (08:00 - 17:00) [372]
	  ◦ CSS G3
	• Kabinet vještina, vježbalište 4 (08:00 - 17:00) [374]
	  ◦ CSS G4

17.01.2024	
	Practical 6. Recognition and management of acutely ill or injured patient in out-of-hospital setting: • ZZHM PGŽ Rijeka (08:00 - 17:00) [471] [2765] ◦ CSS G4 ◦ CSS G3
naslovna asistentica Kajčić Senka, dr. med. [471] · naslovni viši asistent Rošić Damir, dr.med. [2765]	
18.01.2024	
	Practical 9. Integrated simulation of all clinical skills – part 1: • Kabinet vještina, vježbalište 3 (08:00 - 17:00) [353] ◦ CSS G3 • Kabinet vještina, vježbalište 4 (08:00 - 17:00) [355] ◦ CSS G4
asistent Bura Matej, dr. med. [355] · Šuper-Petrinjac Erika, dr. med. [353]	
19.01.2024	
	Practical 10. Integrated simulation of all clinical skills – part 2: • Kabinet vještina, vježbalište 3 (08:00 - 17:00) [353] ◦ CSS G3 • Kabinet vještina, vježbalište 4 (08:00 - 17:00) [355] ◦ CSS G4
asistent Bura Matej, dr. med. [355] · Šuper-Petrinjac Erika, dr. med. [353]	

Popis predavanja, seminara i vježbi:

PREDAVANJA (TEMA)	Broj sati	Mjesto održavanja
Lecture 1. Introduction to Simulation Medicine	1	ONLINE

Lecture 2. Cardiopulmonary Resuscitation Algorithm	1	ONLINE
Lecture 3. Initial assessment and hand-over of acutely ill patient (ABCDE, SAMPLE and SBAR)	1	ONLINE
Lecture 4. Essentials for interpretation of the 12-lead ECG in medical emergencies	2	ONLINE
Lecture 5. Initial assessment and management of a patient with cardiac arrhythmias	1	ONLINE
Lecture 6. Trauma assessment and management	1	ONLINE
Lecture 7. Initial assessment and management of paediatric emergencies	1	ONLINE

VJEŽBE (TEMA)	Broj sati	Mjesto održavanja
Practical 1. Recognition and management of deteriorating patient; advanced life support	13	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 2. Acute Respiratory Failure – background, assessment, recognition, and management	13	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 3. Sudden Deterioration in Neurologic Status. Sepsis and septic shock	13	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 4. Fluid and electrolyte disturbances and therapy; hypovolemic shock	13	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 5. Trauma Assessment and Management	13	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 6. Recognition and management of acutely ill or injured patient in out-of-hospital setting	12	ZZHM PGŽ Rijeka
Practical 7. Clinical Emergencies in Obstetrics and Gynaecology	12	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 8. Paediatric Emergencies and Life Support	12	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 9. Integrated simulation of all clinical skills – part 1	12	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4
Practical 10. Integrated simulation of all clinical skills – part 2	12	Kabinet vještina, vježbalište 1 Kabinet vještina, vježbalište 2 Kabinet vještina, vježbalište 3 Kabinet vještina, vježbalište 4

ISPITNI TERMINI (završni ispit):

1.	20.02.2024.
2.	30.04.2024.
