**IZVEDBENI NASTAVNI PLAN  
2023/2024**

Za kolegij

**Anatomical Base of Lesions of Spinal and Cranial Nerves**

Studij:	<b>Medical Studies in English (R)</b> (izborni) Sveučilišni integrirani prijediplomski i diplomski studij
Katedra:	<b>Zavod za anatomiju</b>
Nositelj kolegija:	<b>prof. dr. sc. Zoričić Cvek Sanja, dr. med.</b>
Godina studija:	<b>1</b>
ECTS:	<b>1.5</b>
Stimulativni ECTS:	<b>0 (0.00%)</b>
Strani jezik:	<b>Mogućnost izvođenja na stranom jeziku</b>

**Podaci o kolegiju:**

The main topic of the elective course is the morphological and functional characteristics of cranial and spinal nerves with a special focus on topographic relationships and the pathways these nerves pass through. On the basis of topographic relationships, the anatomical structures that can lead to their lesions will be shown, as well as the corresponding outbursts from the side of the organs that are innervated by the mentioned nerves. In addition to the morphological descriptions of the anatomical structures, the mechanisms that lead to lesions will be described and clarified (for the nn. olfactorius, anosmia and liquor will be described as symptoms indicating nerve damage in the area of the laminae cribrosae ossis ethmoidalis, for n. II, hemianopsia and other lesions on the visual pathway in terms of involvement of the optic nerve, chiasma opticus, tractus opticus and other variants, etc. to various lesions of the peripheral branches of the plexus for the innervation of the upper and lower extremities).

**Popis obvezne ispitne literature:**

Sobotta Anatomy textbook, Editor Jens Waschke, Tobias M. Bockers, Friedrich Paulsen, ELSEVIER 2015

**Popis dopunske literature:**

## **Nastavni plan:**

### **Predavanja popis (s naslovima i pojašnjenjem):**

#### **P1: The morphological and functional characteristic of the cranial nerves (nn. olfactorius, n. opticus, n. oculomotorius, n. trochlearis, n. abducens)**

The students will be prepared for the theoretical description of the functional division of the cranial nerves so as their close topographical relationships. At the morphological, functional and topographical characteristics of the cranial nerves, the student will be able to conclude the origin and the topography of the lesions in relation to the symptoms at the periphery.

#### **P2: The anatomical base for the lesion of the trigeminal nerve**

The students will be trained to connect functionally different types of trigeminal nerve nuclei, their location in brain, their point of exit from the brainstem, their intracranial and extracranial pathway and close topographical relations and the symptoms of the lesions at the periphery.

#### **P3: N. vestibulocochlearis and inner ear**

The students will be trained to abstract the nuclei, the points of exit from the brainstem and the pathway to the bony and membranous labyrinth of the inner ear. On the basis of symptoms and hearing disturbance, students will be able to recognize and to conclude where is the site of nerve lesion.

#### **P4: Spinal nerves and cervicobrachial syndroms**

The student will be able to point out the main morphological and functional characteristics of the different spinal nerves regarding the segmentation and peripheral pattern of innervation. On the basis of the symptoms regarding disturbance in motor and sensory function of the brachial plexus, the student will be able to conclude the site of lesion of the spinal nerve

#### **P5: Spinal nerves and cervicobrachial syndroms**

The student will be able to point out the main morphological and functional characteristics of the different spinal nerves regarding the segmentation and peripheral pattern of innervation. On the basis of the symptoms regarding disturbance in motor and sensory function of the brachial plexus, the student will be able to conclude the site of lesion of the spinal nerve

### **Seminari popis (s naslovima i pojašnjenjem):**

#### **S3: N. facialis. Central and peripheral lesion of the nerve.**

On the basis of theoretical descriptive and topographical characteristic, the students will be able to conclude which symptoms will be present in a case of central and peripheral lesion of the n. facialis.

#### **S4: N. glossopharyngeus and the lesion**

On the basis of theoretical knowledge regarding the morphology and topography of the n. IX, the students will be able to construct the clinical symptoms and difficulties in patients with central and peripheral lesion of the n. IX.

#### **S6: N. vagus and parasympathetic innervation of the visceral organs**

On the basis of theoretical knowledge regarding the morphology and topography of the n. X, the students will be able to construct the clinical symptoms and difficulties in patients with central and peripheral lesion of the n. X, especially regarding the cardiovascular and respiratory system.

#### **S9: N. XI and n. XII and motor disturbances of the neck and tongue muscles**

On the basis of theoretical knowledge regarding the morphology and topography of the n. XI and n. XII, the students will be able to construct the clinical symptoms and difficulties with the movements in a case of central and peripheral lesion of the n. XI and XII.

#### **S12: Cervical spinal nerves**

The student will be able to conclude the site of lesion of the cervical spinal nerves (central and peripheral lesions)

regarding the peripheral symptoms.

#### **S15:Plexus brachialis**

The students will learn and accepted the skills how to recognize individual nerve lesions of the plexus brachialis.

#### **S18:NN. spinales thoracici. Herpes zoster of the thoracal spinal nerves dermatomes.**

Regarding the anatomical and functional characteristic of the thoracal spinal nerves, the students will be able to register the site of the lesion in a case of herpes zoster.

#### **S1: N. facialis. Central and peripheral lesion of the nerve**

On the basis of theoretical descriptive and topographical characteristic, the students will be able to conclude which symptoms will be present in a case of central and peripheral lesion of the n. facialis.

#### **S2: N. facialis. Central and peripheral lesion of the nerve**

On the basis of theoretical descriptive and topographical characteristic, the students will be able to conclude which symptoms will be present in a case of central and peripheral lesion of the n. facialis.

#### **S5:N. glossopharyngeus and the lesion**

On the basis of theoretical knowledge regarding the morphology and topography of the n. IX, the students will be able to construct the clinical symptoms and difficulties in patients with central and peripheral lesion of the n. IX.

#### **S7:N vagus and parasympathetic innervation of the visceral organs**

On the basis of theoretical knowledge regarding the morphology and topography of the n. X, the students will be able to construct the clinical symptoms and difficulties in patients with central and peripheral lesion of the n. X, especially regarding the cardiovascular and respiratory system.

#### **S8:N vagus and parasympathetic innervation of the visceral organs**

On the basis of theoretical knowledge regarding the morphology and topography of the n. X, the students will be able to construct the clinical symptoms and difficulties in patients with central and peripheral lesion of the n. X, especially regarding the cardiovascular and respiratory system.

#### **S10:N. XI and n. XII and motor disturbances of the neck and tongue muscles**

On the basis of theoretical knowledge regarding the morphology and topography of the n. XI and n. XII, the students will be able to construct the clinical symptoms and difficulties with the movements in a case of central and peripheral lesion of the n. XI and XII.

#### **S11:N. XI and n. XII and motor disturbances of the neck and tongue muscles**

On the basis of theoretical knowledge regarding the morphology and topography of the n. XI and n. XII, the students will be able to construct the clinical symptoms and difficulties with the movements in a case of central and peripheral lesion of the n. XI and XII

#### **S13:Cervical spinal nerves**

The student will be able to conclude the site of lesion of the cervical spinal nerves (central and peripheral lesions) regarding the peripheral symptoms.

#### **S14:Cervical spinal nerves**

The student will be able to conclude the site of lesion of the cervical spinal nerves (central and peripheral lesions) regarding the peripheral symptoms.

#### **S16:Plexus brachialis**

The students will learn and accepted the skills how to recognize individual nerve lesions of the plexus brachialis.

#### **S17:Plexus brachialis**

The students will learn and accepted the skills how to recognize individual nerve lesions of the plexus brachialis.

#### **S19:NN. spinales thoracici. Herpes zoster of the thoracal spinal nerves dermatomes.**

Regarding the anatomical and functional characteristic of the thoracal spinal nerves, the students will be able to register the site of the lesion in a case of herpes zoster.

**S20:NN. spinales thoracici. Herpes zoster of the thoracal spinal nerves dermatomes.**

Regarding the anatomical and functional characteristic of the thoracal spinal nerves, the students will be able to register the site of the lesion in a case of herpes zoster.

**Obveze studenata:**

**Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):**

**Ostale napomene (vezane uz kolegij) važne za studente:**

-
