

Medicinski fakultet u Rijeci

**IZVEDBENI NASTAVNI PLAN
2024/2025**

Za kolegij

Introduction to Robotics

Studij:	Medical Studies in English (R) (izborni) Sveučilišni integrirani prijediplomski i diplomski studij
Katedra:	Centar za biomodeliranje i inovacije u medicini
Nositelj kolegija:	izv. prof. dr. sc. Maričić Sven
Godina studija:	1
ECTS:	1.50
Stimulativni ECTS:	0.00 (0.00%)
Strani jezik:	Mogućnost izvođenja na stranom jeziku

Podaci o kolegiju:

Elements of the robotic system. The fundamental laws of robotics. Historical development of technology. The application of robots in biomedicine. Robotic system – planning and production, management. Planning and working with the robotic system. Getting to know the concepts of bionics and cybernetics. Structures and their implementation. Getting to know the functional model.

Popis obvezne ispitne literature:

- Lynch M. K., Park C. F.: Modern Robotics: Mechanics, Planning, and Control, ISBN: 978-1107156302
- Simpson, D., C.: Introduction to Robotics, Santers R. (Editor), Logic Design Publishing, ISBN: 978-0968686027
- Niku, S., B.: Introduction to Robotics: Analysis, Control, Applications, John Wiley&Sons, ISBN: 978-0470604465

Popis dopunske literature:

Winfield, A.: Robotics: A Very Short Introduction, Oxford University Press, ISBN: 978-0199695980

Nastavni plan:

Seminari popis (s naslovima i pojašnjenjem):

Introduction to the course, basic robotics elements.

Basic course information. Presentation of seminar topics in the field of medical robotics. Presentation and analysis of the basic elements of robotic systems.

Development of technology. Significant development stages.

Technological development of robotic systems. Overview of significant solutions with an emphasis on application in the biomedical field. Analysis of significant technological components and software solutions.

Basic parts of the robotic system - structure and principles.

Structure of the robotic system. Drives and control elements. Types and methods of management. Demonstration of control with four degrees of freedom of movement. An example of working with an endeffector.

Navigating in virtual 3D space.

The basic settings of the computer environment. Local and global coordinate system. Navigating in 3D space. Working with a computer model, virtual 3D space.

Basic concepts and principles of bionics and cybernetics.

Bionic systems, basic elements. Principles and principles of work and development. Cybernetic systems, basic elements.

Basics of robot system simulation, creation of a schematic representation.

Basic elements and settings of robot system simulation. Robotic simulation, control methods. Presentation of the work with basic elements. Schematic representation and work with 3D models.

Trends in technology development.

Development trends analysis. Presentation of various case studies of successful application in the biomedical field.

Obveze studenata:

Regular attendance at classes, writing a seminar paper.

Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):**Ostale napomene (vezane uz kolegij) važne za studente:**

-

SATNICA IZVOĐENJA NASTAVE 2024/2025

Introduction to Robotics

Seminari

(mjesto i vrijeme / grupa)

Popis predavanja, seminara i vježbi:

SEMINARI (TEMA)	Broj sati	Mjesto održavanja
Introduction to the course, basic robotics elements.	3	
Development of technology. Significant development stages.	4	
Basic parts of the robotic system - structure and principles.	4	
Navigating in virtual 3D space.	4	
Basic concepts and principles of bionics and cybernetics.	3	
Basics of robot system simulation, creation of a schematic representation.	4	
Trends in technology development.	3	

ISPITNI TERMINI (završni ispit):
