## **Podaci o kolegiju:**

The aim of the course is to introduce the student to the role of psychotherapy in the treatment of mental disorders and to the therapeutic and practical foundations of the most important psychotherapeutic approaches (psychotherapy schools). The student will familiarize with the most frequently used psychotherapy approaches and techniques as well as indications for the use of psychotherapy in general and within a specific therapeutic approach.

After the course, students will distinguish psychotherapeutic approaches according to their theoretical settings, significant representatives, understanding of the onset of mental disorders and basic mechanisms and techniques of therapy. Among other, students will be familiarized with the basis of consultation as a therapeutic technique as well as with auxiliary techniques like "grounding" and psycho-education.

Through learning about specific psychotherapeutic approaches, students will be able to deepen their understanding of personality psychology and basic psychotherapeutic concepts that are applicable in the work in any medical field.

The course is conducted through interactive lectures and seminars with a discussion on the topic. In practicals, students have the opportunity to experience some elements of psychotherapeutic work.

Eligibility for the course is successful completion of the course of Psychiatry in 4th year of the studies.

## **Popis obvezne ispitne literature:**

Short F, Thomas P. Core approaches in counselling and psychotherapy. London: Routledge, 2015.
